Remarks	: Take note of the information given by the producer concerning permeability and break through times, and of special work-place conditions (mechanical strain, duration of contact). Be aware that in daily use the durability of a chemical resistant protective glove can be notably shorter than the break through time measured according to EN 374, due to the numerous outside influences (e.g. temperature). The choice of an appropriate glove does not only depend on its material but also on other quality features and is different from one producer to the other.
Skin and body protection	: Flame retardant protective clothing Workers should wear antistatic footwear.
Respiratory protection	: In the case of vapour formation use a respirator with an approved filter. Respirator with filter type A The filter class for the respirator must be suitable for the maximum expected contaminant concentration (gas/vapour/aerosol/particulates) that may arise when handling the product. If this concentration is exceeded, self-contained breathing apparatus must be used. Suitable respiratory equipment: Self-contained breathing apparatus (EN 133)
Protective measures	: Wear suitable protective equipment. Avoid contact with the skin and the eyes. Handle in accordance with good industrial hygiene and safety practice.
